'Approximately 11 million hectares of Australia's forests and woodlands are on private property' according to the National Forest Inventory.

This includes many hundreds of thousands of hectares of private native forests in Victoria. If the management of some of these private forests can be improved and can be demonstrably sustainable, they provide the opportunity to help support communities in regional Victoria, assist biodiversity conservation and help ensure that private native forests are valued and managed as forests into the future.'

THE AIM OF THE FORUM

is to help raise awareness of private native forests as potentially valuable assets with multiple benefits including biodiversity conservation and timber production. The forum further aims to encourage informed decision making to assist the sustainable management of these forests.

Take the opportunity as questions from the floor will be taken following each presentation.

PEOPLE WHO SHOULD ATTEND INCLUDE:

Private forest owners, planning officers from local government, conservation groups and other farm forestry stakeholders and interested people
